

D01-D05: Drop Series Table Set-up Instructions:

Thank you for your purchase. Please follow these simple steps outlined below to ensure the safe and proper set-up of your drop series table:

-Place metal frame correct side up in location of use. Correct side up is labeled. Gently remove grey adhesive foam from base.

-Gently lower stone/timber top right side up, maintaining equal clearance between stone top and legs of frame.

-Engage (3) screws (supplied by skram) by hand from the base into threaded inserts in underside of table top, using care to ensure proper thread engagement. Micro-adjust for consistent reveals on all three legs. Use allen wrench (supplied by skram) to firmly tighten. Do not overtighten screws.

-To move/transport assembled table, it is advised to grip metal frame (rather than stone/timber top) while keeping table in the upright position.

notes:

-Further information regarding the care and use of these products may be found by referring to the enclosed 'care and use instructions'.

-Please direct questions regarding the product or installation to Skram.
